SVSU Foundation Office, c/o Hunter Maxwell Scholarship, 7400 Bay Rd, University Center, MI 48710.

For additional camp information, please visit: <http://mensbasketball.svsusportscamps.com/>

Medical Treatment and Release Authorization Form

Name _____
 Address _____
 City _____
 State _____
 Zip _____
 Date of Birth _____
 Primary Care Physician _____
 Physician Office Phone# _____
 Is camper currently being treated by a physician for injury or illness?
 If yes, please explain _____
 List medical conditions _____
 List medications currently taken _____
 List allergies _____
 Policy holder's name _____
 Insurance Company _____
 Policy # _____
 Relationship to Camper _____
 Home phone number _____
 Emergency phone number _____

As the parent/guardian of the camper listed above I hereby agree to the following as a condition of _____'s participation in the Saginaw Valley State University (SVSU), summer camp program and related activities. I give my permission to SVSU to provide, seek, obtain, or approve any routine, necessary, or emergency health care during the camper's involvement in the SVSU summer camp program. I understand that this authorization is given in advance of any specific consent to any and all such diagnosis, treatment or medical care being required and is to serve as specific consent to any and all such diagnosis, treatment or hospital care which may be deemed advisable. I understand my rights under the Health Insurance Portability and Accountability Act (HIPPA) and authorize SVSU to release information as necessary for managing summer camp healthcare. I attest that a physician has examined the camper in the past twelve months and he/she was found to be in good health. I understand and agree that SVSU may in its sole discretion, decide to refuse participation by the camper based on disclosure of medical condition. I attest that currently there is no medical reason for the camper not to participate in the strenuous physical activities of the sports camp program. I acknowledge that participation in sports camp and related activities involves an inherent risk of personal injury. I assume such risk on behalf of the camper and give my permission to the camper to participate in all sports camp activities. I release and agree to hold harmless SVSU, its Board of Trustees, students and employees from all claims, actions, damages and liabilities for personal injury or damage relating to or arising out of any sports camp activity except where the injury or damage relating to or arising out of any sports camp activity is caused by the gross negligence of the university's employees. I understand the camper will be subject to the rules and regulations of the SVSU sports camp. I understand that any person who repeatedly disobeys camp policies or procedures will be immediately expelled from camp.

Parent and Athlete concussion information sheet

What is a concussion?

A concussion is a type of traumatic brain injury that changes the way the brain normally works. A concussion is caused by a bump, blow, or jolt to the head or body that causes the head and brain to move quickly back and forth. Even a "Ding," "getting your bell rung," or what seems to be a mild bump or blow to the head can be serious.

What are the signs and symptoms of a concussion?

Signs and symptoms of concussion can show up right after the injury or may not appear or be noticed until days or weeks after the injury. If an athlete reports one or more symptoms of a concussion after a bump, blow or jolt to the head or body, He or she should be kept out of play the day of the injury. The athlete should only return to play with permission from a health care professional experienced in evaluation for concussion.

Symptoms reported by athletes-

Headache or "pressure" in the head. Nausea or vomiting. Balance problems or dizziness. Double or Blurry Vision. Sensitivity to light. Sensitivity to noise. Feeling sluggish, hazy, foggy, or groggy. Concentration or memory problems. Confusion. Just not "feeling right" or is "feeling down".

Signs observed by coaching staff-

Appears dazed or stunned. Is confused about assignment or position. Forgets instruction. Is unsure of game, score, or opponent. Moves clumsily. Answers questions slowly. Loses consciousness (even briefly). Shows mood, behavior, or personality changes. Can't recall events prior to hit or fall. Can't recall events after hit or fall.

Did you know?

Most concussions occur without loss of consciousness. Athletes who have, at any point in their lives, had a concussion have an increased risk for another concussion. Young children and teens are more likely to get a concussion and take longer to recover than adults.

Concussion danger signs-

In rare cases, a dangerous blood clot may form on the brain in a person with a concussion and crowd the brain against the skull. An athlete should receive immediate medical attention if after a bump, blow, or jolt to the head or body s/he exhibits any of the following danger signs. One pupil larger than the other, is drowsy or cannot be awakened. A headache that gets worse. Weakness, numbness, or decreased coordination. Repeated vomiting or nausea. Slurred speech. Convulsions or seizures. Cannot recognize people or places. Becomes increasingly confused, restless, or agitated. Has unusual behavior. Loses consciousness.

What should you do if you think your athlete has a concussion?

If you suspect that an athlete has a concussion, remove the athlete from play and seek medical attention. Do not try to judge the severity or the injury yourself. Keep the athlete out of play the day of the injury and until a health care professional, experienced in evaluating for concussion, says s/he is symptom-free and it's ok to return to play. Rest is key to helping an athlete recover from a concussion. Exercising or activities that involve a lot of concentration, such as studying, working on their computer, and playing video games. May cause concussion symptoms to reappear or get worse. After a concussion, returning to sports and school is a gradual process that should be carefully managed and monitored by a health care professional. Remember, concussions affect people differently. While most athletes with a concussions recover quickly and fully, some will have symptoms that last for days, or even weeks. A more serious concussion can last for months or longer.

Why should an athlete report their symptoms?

If an athlete has a concussion, his or her brain needs time to heal. While an athlete brain is still healing, s/he is much more likely to have another concussion. Repeated concussions can increase the time it takes to recover. In rare cases, repeat concussions in youth athletes can result in brain swelling or permanent damaged to their brain. They can even be fatal.

I have read and understood the above information about concussions and how they should be managed.
